**1 5 square solar panel**

## Overview

---

What does a 1.5kw solar system look like on a roof?

And here's what a 1.5kW system looks like on a roof (this one is made up of 9 x 165W panels – so it's a \*really\* old system): These days, because panels are both larger and more efficient, a 1.5kW solar system only requires 3 or 4:.

How much space does a 1.5kw solar system need?

Considering the physical space required for a 1.5kW solar system, it's important to take into account the size of each panel. Since each panel is approximately 17 sqft, and you will need 5 panels, the total footprint of the system will be 85 sqft.

Is a 1.5kw solar system a good value?

Due to a scheme called the “solar multiplier” you used to get twice the rebate for the first 1.5kW of any system, compared to subsequent kWs. So in terms of dollars per kW, a 1.5kW system represented the best value. However, all that has now changed. The “solar multiplier” which favoured 1.5kW solar systems is gone. But don't panic!.

How big should a solar panel be?

To get even more power, some solar panels have become slightly larger (about 2.456 m tall for 156 half-cell formats) to reach 600 W or more. This helps you visualize how higher-wattage modules often require slightly larger footprints. Choosing the right panel for your space can boost overall system efficiency and reduce installation complexity.

## 1.5kW Solar System

Many Solar Panels Make Up A 1.5Kw System? Much Electricity Will A 1.5Kw Solar System generate? Much Revenue Will A 1.5Kw Solar System generate? Much Will A 1.5Kw Solar Power System Cost? Long Before A 1.5Kw Solar Power System Pays For itself? Expect to pay about \$2,500 - \$4,000 out of pocket, after the rebate. As mentioned, you'll get much better bang for buck with a larger system. For example, a good quality 6.6kW system in 2025 starts at around the \$5,500 mark - so you'll get more than 4 times the capacity (power) for around only twice the price.
