# **1000kw solar with energy storage**

## Overview

---

What is a 1000kW solar power system?

A 1000kW solar power system is suitable for Large industrial energy users or solar farms. This size of solar power system is classified as 'Large Scale'. The cost of a 1000kW solar system can vary significantly depending on the solar business you purchase it from, as well as location-specific factors such as logistics and taxes.

How big is a 100kW solar power system?

A 100kW system using 370W panels will require about 473.6 square meters of roof to be installed. Each 370W panel measures about 1.75m x 1m. 100kW solar power systems are mostly suitable for Larger businesses with high energy needs. This size of solar power system is classed as "Commercial/Industrial".

How many square meters is a 1000kW Solar System?

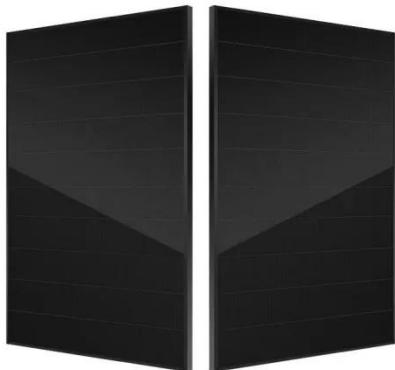

A 1000kW solar system using 370W panels requires approximately 4,741.6 square meters of roof space for installation. Each 370W panel measures about 1.75m x 1m. 1000kW solar power systems are mostly suitable for Large industrial energy users or solar farms.

How much electricity does a 100kW Solar System produce?

A 100kW system with a high quality inverter and panels will produce more electricity than a 100kW system with lower quality components in the same location. Generally speaking you can expect your 100kW commercial solar system to generate around 150,000kWh (kilowatt hours) of energy each year. This works out to be 411kWh per day.
