### What is a 100kW Solar System?

A 100kW solar system is a large capacity commercial solar system that is best suitable for large manufacturing units or businesses with high energy usage. Similar to other capacities solar systems, this 100kW solar system includes solar panels, an on-grid solar inverter, and other solar accessories.

### Where can I buy a 100 kW solar system?

SunWatts has a big selection of affordable 100 kW PV systems for sale. These 100 kW size grid-connected solar kits include solar panels, DC-to-AC inverter, rack mounting system, hardware, cabling, permit plans and instructions.

### How much space does a 100kW Solar System need?

A 100kW Solar Kit requires up to 6,500 square feet of space. 100kW or 100 kilowatts is 100,000 watts of DC direct current power. This could produce an estimated 12,000 kilowatt hours (kWh) of alternating current (AC) power per month, assuming at least 5 sun hours per day with the solar array facing South.

### How many solar panels do you need for a 100000 Watt system?

To build a 100000 watt solar system you would need from 150 to 250 solar panels, assuming that you'll pick modules with a power output from 400 to 600 Watts. Generally, commercial systems are made with 72/144-cell, 96-cell panels or larger. The 100kw solar system size thus will depend on the panels that you'll choose.
