**12v inverter charging and using
at the same time**

Overview

How do you recharge a 12V inverter's battery?

The 12V inverter from Electro Gadgets draws its power from a 12V (DC) Deep Cycle battery. To recharge the battery, plug in the power cable from the inverter into an AC outlet and switch it to charge mode.

Can a power inverter charge a battery?

A power inverter is great for energy needs. It can easily take battery DC power and convert it to AC power. However, as you use that AC electricity, your battery life starts to go down, and you need a charge. Eventually, a power inverter will leave you with a dead battery unless you can charge your battery while connected to an inverter.

What is the difference between solar power and inverter charging?

The only difference is the setting on your charging controller, which we will start to review now. Solar power is the most common way to charge your battery while connected to an inverter. It acts as a battery charger that provides constant voltage to keep your battery charging.

Can you use a 12V rated inverter charger to power a battery?

You can use a 12V rated inverter charger to power it. The maximum capacity is 600ah, similar to the series. The difference is the voltage because in a series connection it goes up to 36V. If batteries are in a parallel connection, the inverter charger must supply the current needed by every battery.
