

## EQACC SOLAR

# 4 hours uninterrupted power supply

## Overview

---

What are uninterruptible power supply hours?

Uninterruptible Power Supply hours refer to the duration a UPS can sustain power to connected devices during an outage. This time can vary widely based on several factors, including battery capacity, load requirements, and the UPS's efficiency. Knowing how to calculate this can help you select the right UPS for your needs.

Do you need an uninterruptible power supply (UPS)?

A power failure is more than an inconvenience—it can knock out essential equipment for hours on end. If you have important electronics that have to keep running when the power's out, you'll need an uninterruptible power supply (UPS). Many smart devices have built-in battery packs, with modern laptops packing enough cells to last a whole day.

What is a UPS (uninterruptible power supply) calculator?

A UPS (Uninterruptible Power Supply) Calculator is a vital tool designed to help users determine the appropriate UPS size required to support their electronic devices during a power outage. This calculator assists in ensuring that all connected devices can continue operating smoothly without interruption when the main power source fails.

How do I know if my ups needs a power supply?

The power consumption is typically measured in watts (W) or kilowatts (kW). Example: If you have a server that consumes 500W, this is the load that your UPS will need to support. Next, you need to identify the capacity of your UPS. This is usually given in volt-amperes (VA) or kilovolt-amperes (kVA).
