

# 5G mobile base station electromagnetic battery monitoring

18650 CELL

18650 Battery Pack 2S1P

18650 Battery Pack  
4S1P

## Overview

---

Do 5G application base stations meet the electromagnetic radiation environment control limits?

According to the analysis of the monitoring data, the electromagnetic radiation environment levels of 5G application base stations at various monitoring points in urban areas all meet the requirements of the Electromagnetic Environment Control Limits (GB8702-2014).

Can 5G application base stations avoid pollution before treatment?

To understand the current situation of the electromagnetic radiation environment of 5G application base stations is the basis for avoiding the old road of “pollution before treatment” in environmental management and solving the problem of neighbourhood avoidance.

What is a 5G monitoring method?

city to conduct measurements. The monitoring method refers to the national standard "5G mobile implementation" (HJ1151-2020)", which was implemented on 1 March 2021. The method is base stations outside the exemption scope specified in GB 8702.

Do 5G base stations need a field meter?

Fast variation of the user load and beamforming techniques may cause large fluctuations of 5G base stations field level. They may be underestimated, resulting in compliance of base stations not fitting the requirements. Apparently, broadband field meters would not be adequate for measuring such environments.

## 5G mobile base station electromagnetic battery monitoring

## 5G Mobile Communication Base Station Electromagnetic ...

The current national policies and technical requirements related to electromagnetic radiation administration of mobile communication base stations in China are described, ...
