5MW Mobile Energy Storage Container Selection Guide

Overview

What is a 5MWh liquid-cooling energy storage system?

The 5MWh liquid-cooling energy storage system comprises cells, BMS, a 20'GP container, thermal management system, firefighting system, bus unit, power distribution unit, wiring harness, and more. And, the container offers a protective capability and serves as a transportable workspace for equipment operation.

What is a 2.5mw/5.016mwh battery compartment?

The 2.5MW/5.016MWh battery compartment utilizes a battery cluster with a rated voltage of 1331.2V DC and a design of 0.5C charge-discharge rate. The energy storage batteries are integrated within a non-walk-in container, which ensures convenient onsite installation.

What are the functions of the energy storage system?

The energy storage system supports functions such as grid peak shaving, frequency regulation, backup power, valley filling, demand response, emergency power support, and reactive power compensation. The 2.5MW/5.016MWh battery compartment utilizes a battery cluster with a rated voltage of 1331.2V DC and a design of 0.5C charge-discharge rate.

How many battery clusters are in a 20 GP cabin?

The cabin length follows a non-standard 20'GP design (6684mm length × 2634mm width × 3008mm height). Inside, there are 12 battery clusters arranged back-to-back, each with an access door for equipment entry, installation, debugging, and maintenance.
