Overview

How much does solar battery storage cost?

If you're looking to buy battery storage for your solar panels, you can probably expect to pay between \$7,000 and \$18,000. Just know that the overall price range for a solar battery is even wider, with prices anywhere from a few hundred dollars to \$30,000+, depending on what you buy, who you buy it from and how you plan to use it.

How long do solar batteries last?

Most solar batteries last between 10 and 15 years, depending on the type of battery, how often it's used and how well it's maintained. Lithium-ion batteries, the most common type for home solar systems, typically have longer lifespans and higher efficiency compared to lead-acid options.

How do I choose a solar battery?

When comparing solar battery options, remember to consider what's included in any given price before signing a contract. For example, you may have to buy an inverter or charge controller separately to get your battery operational. Lead-acid batteries are often significantly cheaper than their lithium-ion counterparts.
