

## **EQACC SOLAR**

# **A kind of solar container battery container**

## Overview

---

What is a shipping container battery?

It is a large-scale energy storage system housed within a shipping container. These batteries are designed to store and discharge large amounts of electricity, often generated from renewable sources such as solar or wind.

What is a solar container?

Our Solar Containers are designed in a way to maximize ease of operation. It's not only meant to transport PVs but also to unfold them on site. It is based on a 20' sea container. The efficient hydraulic system helps quickly prepare the Solar to work. Because of their construction, our containers offer unmatched flexibility and mobility.

What is a power storage container?

The container typically contains multiple battery modules, inverters, cooling systems, and safety mechanisms. These systems can be deployed individually or combined to create massive energy storage solutions capable of stabilizing electrical grids, supporting renewable energy integration, and providing backup power in case of outages.

How scalable are energy storage containers?

Scalability: They are highly scalable. Multiple containers can be connected to create energy storage systems of virtually any size, from a few megawatt-hours (MWh) to hundreds of megawatt-hours. This scalability makes them suitable for a wide range of applications, from small commercial installations to large grid-scale projects.
