# Amman introduces new energy storage configuration

## Overview

---

Amman, April 22 (Petra) -- Energy experts have lauded the Cabinet's recent approval of a grid-scale battery energy storage system (BESS) for the National Electric Power Company's transmission network, calling it a critical step toward enhancing Jordan's energy security and grid stability. Does lithium-ion battery storage contribute to achieving the Jordan Energy Strategy?

Almasri et al. (2020) [ 116] investigated the contribution of lithium-ion battery storage to achieving the Jordan Energy Strategy 2020–2030. The authors evaluated the impact of battery storage on the energy sector and its potential contribution to the national energy mix.

Why was Amman chosen as a place to run the simulations?

Amman, Jordan, was chosen as a place in which to run the simulations because of its temperate climate. The scholars categorized the total heat transmission (U-value) of glass with the shading coefficient (S·C) into nine different ways. They are referred to as the Combination Number (CN).

Are stakeholders involved in the energy transition in Jordan?

Alasali et al. (2022) [ 71] studied stakeholder participation processes in the energy transition in Jordan, providing insights into the different perspectives and priorities of stakeholders involved in the energy sector. The solar and wind resources available for electricity production in Jordan are substantial nationally.

Are PV systems the most cost-effective option for electricity generation in Jordan?

They found that PV systems are Jordan's most cost-effective option for electricity generation. They studied and contributed to different aspects of renewable energy in Jordan, including technological solutions, potential sources, policies, economic viability, and challenges.
