# **Andorra City shuts down 5G base station in the middle of the night**

## Overview

---

Does Europe need a 5G base station?

Europe's score on the network pillar highlights the need to accelerate the deployment of 5G base stations (with 11 of the 15 European countries included in the 5GI scoring lower than 30 on this indicator). Europe fares better on coverage: 24 European countries reported over 90% 5G population coverage by the end of 2024.

What is the future of 5G?

The future of 5G is clear: more base stations, wider coverage, and improved connectivity. Industry forecasts suggest that by 2025, the total number of 5G base stations worldwide will surpass 5 million. This expansion will be driven by ongoing urbanization, demand for high-speed connectivity, and technological advancements.

What are the challenges with 5G?

One of the biggest challenges with 5G is its energy consumption. A typical 5G base station consumes three times more power than a 4G station. This is due to the need for higher frequencies, greater bandwidth, and more antennas to ensure connectivity.

What is Europe's approach to 5G?

Europe's approach to 5G has been more balanced. By 2023, the continent had around 500,000 active base stations, with countries like Germany, the UK, and France leading the way. Unlike China and the U.S., Europe has emphasized widespread but steady deployment, focusing on balancing urban and rural connectivity.

## Andorra City shuts down 5G base station in the middle of the night

---

### Andorra 5G communication base station power supply ...

This technique reduces opex by putting a base station into a "sleep mode," with only the essentials remaining powered on. Pulse power leverages 5G base stations' ability to ...
