Are solar panels allowed in wetlands

Overview

Are solar panels a wetland impact?

In the past, the posts/pilings that are used to install solar arrays have not been considered a wetland impact that would require compensatory mitigation under the WCA. The reality is that solar arrays bring wetlands into non-aquatic use and may, or may, not negatively impact the wetland's quality or function.

Can wetlands be used for photovoltaic power plants?

The techno-economic feasibility of incorporating up to 20 % wetlands for the installation of photovoltaic power plants is presented in this study. Two sites with major wetland coverage were analyzed. The following are the conclusions drawn from the study::

Should solar panels be installed on posts/pilings in wetlands?

To help local governments evaluate the potential impacts to a wetland's function and value, the Minnesota Board of Water and Soil Resources (BWSR) issued guidance that provides a suggested approach for evaluating projects when they involve the installation of solar panels on posts/pilings in wetlands.

Do wetland solar systems generate more energy?

Therefore, a higher annual power generation was observed from design simulations. The designs that utilize the wetland up to 20 %, have low installation costs of \$ 2.3 million, high energy generation of more than 2 GWh/yr, and have LCOE of \$87/MWh which is lesser than LAZARD's LCOE for solar PV Community systems based on dryland.

Are solar panels allowed in wetlands

Evaluating Solar Panel Effects on Wetlands

Evaluating solar panel effects on wetlands reveals important insights for preserving natural habitats and promoting green energy.
