Austrian factory solar energy storage

Overview

Does Austria offer a 'made in Europe' bonus for solar PV?

Previously, the Austrian Climate Protection Ministry had announced the 'Made in Europe' bonus scheme for only solar systems (see [Austria Announces Made In Europe Bonus For Solar PV](#)). For this year, the ministry is offering a total of €70 million in funding — at 'legally required minimum level' — for solar PV, hydropower, wind and biomass projects.

How much is the subsidy bonus for solar in Austria?

Last year's subsidy bonus was also up to 20% of the total value of the project, and between the two announcements, there is now considerable support for both the manufacturing and deployment of European-made solar components in Austria.

How much money will the government give to solar & electricity storage projects?

As part of the plan, the government will be providing an additional funding of up to 20% for solar and electricity storage projects if they use European components. The bonus will come into effect with the second funding call on J.

How will Austria's energy policy change from Q4 2025?

From Q4 2025, only PV systems with co-located storage will be eligible for subsidies. No funding will be available during negative pricing periods, and hybrid plants will be prioritised. These changes align with efforts to enhance system reliability, as Austria continues to experience high levels of energy curtailment.
