Average price of industrial and commercial solar container energy storage system

Overview

How much does a commercial battery energy storage system cost?

Average Installed Cost per kWh in 2025 In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

How much does energy storage cost?

Let's explore the costs of energy storage in more detail. Although energy storage systems seem attractive, their high costs prevent many businesses from purchasing and installing them. On average, a lithium ion battery system will cost approximately \$130/kWh.

How much does a solar system cost?

\$280 - \$580 per kWh (installed cost), though of course this will vary from region to region depending on economic levels. For large containerized systems (e.g., 100 kWh or more), the cost can drop to \$180 - \$300 per kWh. A standard 100 kWh system can cost between \$25,000 and \$50,000, depending on the components and complexity.

What are the benefits of commercial power storage?

Some of the advantages of commercial power storage include: The benefits of installing battery storage at your facility can be great; however, one must evaluate the total cost of ownership of an energy storage system to determine if it's a good fit. Let's explore the costs of energy storage in more detail.
