

**EQACC SOLAR**

# **BMS and solar container lithium battery matching parameters**

## Overview

---

What is battery management system (BMS)?

BMS is an essential device that connects the battery and charger of EVs . To boost battery performance and energy efficiency, BMS is controlled by critical aspects such as voltage, state of health (SOH), current, temperature, and state of charge (SOC), of a battery .

How do I design a custom BMS for Li-ion batteries?

Designing a custom BMS for Li-ion batteries requires careful consideration of safety, performance, cost, and regulatory requirements. Success depends on thorough understanding of battery chemistry, robust circuit design, comprehensive testing, and adherence to industry best practices.

What is BMS architecture diagram?

Fig5. BMS Architecture Diagram(For reference) The protection and monitoring functions of the battery system are realized by the BMS battery management system. The BMS system of the battery system is managed in three levels, namely L1 BMS, L2 BMS, and L3 BMS. The main functions of each level of BMS are as follows:.

Why is BMS important after a battery?

The key takeaways are as follows: BMS Importance: A well-functioning BMS is imperative after the battery because it handles several aspects of the battery such as SOC, SOH, and many others to guarantee the safety, effectiveness, and durability of the EV.

## BMS and solar container lithium battery matching parameters
