## Overview

---

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

How do battery management systems work?

Battery management system (BMS) is technology dedicated to the oversight of a battery pack, which is an assembly of battery cells, electrically organized in a row x column matrix configuration to enable delivery of targeted range of voltage and current for a duration of time against expected load scenarios.

What is a BMS used for?

A Battery Management System (BMS) is widely used in various applications such as electric vehicles (EVs), energy storage systems (ESS), uninterruptible power supplies (UPS), and industrial battery applications.

What is a battery balancing system (BMS)?

One of the key functions of a BMS is cell balancing, which ensures that each cell in a battery pack is charged and discharged uniformly. Cells in series often exhibit slight differences in capacity, causing certain cells to overcharge or undercharge.
