# Base station solar container battery parameter settings

## Overview

---

Should a battery storage system be added?

If additional framework conditions such as time-dependent electricity tariffs (time-of-use), variable reserves of emergency power, or power limits are to be taken into account, it may make sense to apply additional battery storage system settings.

How do I set up a solar charge controller?

Here's a general outline of how to set up your solar charge controller: Begin with Proper Wiring: Kickstart your setup process by connecting the charge controller to your battery bank and solar panels. Make sure to follow manufacturer's instructions to wire everything correctly.

What voltage does a solar system use?

In most cases, this is the same as your battery voltage. Common system voltage levels are 12V, 24V, or 48V. This is the peak output current your solar panels or array can produce. Essentially, it's the maximum power your system can provide during the most effective solar energy periods.

Do solar charge controllers work with lead-acid batteries?

Regarding lead-acid batteries, most solar charge controllers are pre-set with parameters suitable for this traditional and widely-used battery type. In many cases, it's simply a matter of plug-and-play, but always check the manufacturer's instructions for any specific recommendations or settings.
