

EQACC SOLAR

Battery cabinet production tooling

Overview

What is PC-based battery control?

Our control technology enables end-to-end automation of all processes in battery manufacturing: from electrode production to module and pack assembly. PC-based control offers advantages for all machine types, no matter whether you produce round, pouch, or prismatic battery cells.

How can a PC-based automation platform improve battery cell winding efficiency?

Our approach involves the use of a central PC-based automation platform to achieve maximum process efficiency in battery cell winding, as this allows vision systems, motion tasks, and communication to I/Os to all be controlled with a high level of synchronicity. It also enables precise winding accuracy while maintaining high output.

How can Beckhoff help in battery manufacturing?

Your head start in battery manufacturing with Beckhoff: Our vision system, for example, is used for winding round cells. The rolling process used in round cell production involves winding a jelly roll from an anode strip, a cathode strip, and two separator strips. This calls for exceptional precision and speed.

How does XTS rethink battery production?

Rethinking battery production: The XTS linear transport system increases the flexibility and efficiency of your manufacturing processes. The fast-growing e-mobility market places high demands on battery cell production in terms of speed and efficiency. This is why intelligent, high-performance automation solutions are so essential.

Battery cabinet production tooling

Steps to Build A Cabinet With A Cabinet ...

Using the automatic production line to build a cabinet can significantly increase the production efficiency, save labor and time and ...
