

**EQACC SOLAR**

# **Battery installation regulations for solar container communication stations**

## Overview

---

What is a battery energy storage system?

nents. Battery Energy Storage System (BESS) A rechargeable battery with internal storage specifically designed to store and deliver electric energy into the grid, which includes battery modules, packs, electrical interconnections, means of isolation, cooling system (as appropriate), batter.

What are the new packaging requirements for lithium ion batteries?

Revised Packing Instructions: More stringent requirements for UN-certified packaging, capable of withstanding specific drop tests. State of Charge (SoC) Emphasis: Increased scrutiny on the SoC for standalone lithium-ion battery shipments, with a general requirement not to exceed 30% of rated capacity.

How should batteries be labelled?

and supporting systems. General requirements Lithium-ion batteries, high voltage equipment, battery systems and battery compartments should be adequately labelled using internationally agreed symbols where available. Emergency systems should be.

Should EV batteries be shipped at a low SoC?

State of Charge (SoC): Strongly advocates for shipping batteries at a low SoC (ideally 30%-50%) to reduce energy available for a thermal event. The growing EV market has necessitated a dedicated regulatory framework and industry best practices. Vehicles must be securely stowed to prevent movement.
