Battery wattage is greater than solar panel wattage

Overview

Are solar panels better than batteries?

Solar panels have a longer lifespan (25-30 years) compared to batteries (10-15 years). This means that your solar system will continue to generate electricity long after the battery warranty has expired. When considering the long-term investment, factoring in the potential need to replace batteries earlier than solar panels should be considered.

Should I add more solar panels or batteries to my home energy system?

To understand whether it's better to add more solar panels or batteries to your home energy system, it's a good idea to know exactly how these devices work individually and together. Solar panels convert sunlight into electricity, which can be used to power your home directly.

Do home battery systems generate electricity?

Home battery systems don't generate electricity, instead they store excess energy (usually generated by solar panels) to use at a later time. Of course, you can have solar panels with or without batteries, but the two systems are highly complementary of each other. This comes down to typically energy use patterns.

Can you have solar panels with or without batteries?

Of course, you can have solar panels with or without batteries, but the two systems are highly complementary of each other. This comes down to typically energy use patterns. Thanks to the standard working day, the average home tends to use a significant amount of energy first thing in the morning and in the evening.
