Berne Communications Mobile Base Station

Overview

What is a mobile communication base station?

Mobile communication base station is a form of radio station, which refers to a radio transceiver station that transmits information between mobile phone terminals through a mobile communication exchange center in a certain radio coverage area.

Why is construction of mobile communication base stations important?

The construction of mobile communication base stations is an important part of the investment of mobile communication operators, and is generally carried out around factors such as coverage, call quality, investment benefits, construction difficulty, and maintenance convenience.

What is a baseband unit (BBU)?

This integration improves performance in mobile networks and enables some of the following advances. The baseband unit (BBU) is a crucial component in mobile base stations, handling tasks like signal processing, resource allocation, and protocol management to ensure efficient communication between mobile devices and networks.

What is a baseband unit?

The baseband, main control, transmission, clock and other functions of the base station are integrated into a module called baseband unit BBU (Base Band Unit). The baseband unit is small in size and has a very flexible installation location.

Berne Communications Mobile Base Station

mobile communication base stations

China's mobile communication base station market is poised for significant growth, driven by the rapid expansion of 5G technology and the increasing demand for high-speed internet ...
