

**EQACC SOLAR**

# **Boost module connected to 12V inverter**

## Overview

---

How do I configure a boost converter module?

Note that specific values may vary depending on the model and manufacturer. The pinout of a Boost Converter module may vary, but a common configuration is as follows: Attach the positive terminal of your power source (e.g., battery) to the VIN pin and the negative terminal to the GND pin.

What is the pinout of a boost converter module?

The pinout of a Boost Converter module may vary, but a common configuration is as follows: Attach the positive terminal of your power source (e.g., battery) to the VIN pin and the negative terminal to the GND pin. Many Boost Converters have a potentiometer to adjust the output voltage.

How do I activate a boost converter?

If the module has an EN (Enable) pin, ensure it is connected to a HIGH signal (or left floating, depending on the module) to activate the converter. Input Voltage Range: Ensure the input voltage is within the specified range of the Boost Converter to avoid damage.

What is a boost converter?

What is Boost Converter?

A boost converter is a DC-to-DC power converter that increases a lower input voltage to a higher, regulated output. Also called a step-up converter or chopper, it's useful in systems where low-voltage sources must power higher-voltage circuits. Unlike buck converters, which reduce voltage, boost converters raise it.

## Boost module connected to 12V inverter

---

### UPS Li-ion Boost module with charger, 12V , LaskaKit

Product detailed description Step-Up inverter with protection against power failures. It is possible to connect a Li-pol or Li-ion battery to the inverter which will cover the ...
