# **Can a 24V inverter use a 21V battery**

## Overview

---

Can a solar inverter be used for a 24V Solar System?

In the quest for sustainable energy solutions, setting up a solar inverter system has become increasingly popular. This article focuses on creating a robust 24v solar system using a solar inverter 24v , four 12-volt lithium batteries , and four solar panels.

How much battery does a 24 volt inverter use?

For 24-volt inverters, it is 10 %. The battery capacity for a 12-volt Mass Sine 12/1200, for instance, is 240 Ah, while a 24-volt Mass Sine 24/1500 inverter would require at least 150 Ah. The indicated battery capacity is only for the inverter. The capacity required for other loads should be added to it. How much power does an inverter consume?

Should I upgrade to a 24v battery system?

Above 480W, it may make more sense just to upgrade to a 24V battery system and not deal with such high current. You can do this either with a direct 24V battery or 2 12V batteries in series. Above 960W, it may make sense just to upgrade to a 48V system to avoid such high current.

How much power does a power inverter need?

The power inverter would need to be rated for power above 3840W, typically it would have to be a 5000W inverter. So from 1W to 480W, a 12V system should be sufficient. Above 480W to 960W, a 24V system should work well. Above 960W, a 48V system would be best.
