**Can a simple container be used
to store a generator**

Overview

Thinking of tucking your generator into a cosy little box to keep it safe from the weather?

Don't. Generators and enclosed spaces go together like a barbecue in a tent—dangerous and downright silly. Do you need a container for a portable generator?

Whether you call it a box, shed, shelter, or enclosure, your generator needs to be protected and integrated into the environment around it. Here are some of the best reasons for building a container for your portable generator.

Does a generator need long-term storage?

Unlike the short-term solution, long-term storage of a generator can become a little trickier. The most important factor when it comes to the effective operation of any generator is how long the fuel has been in the tank. The longer that fuel has been resting in a generator's tank then the more likely it is to have trouble and clog.

How do you store a generator?

Not everyone is the same nor do they have the same storage facilities as everyone else. If the pass-through storage area is large enough, placing your generator on a pull out shelf would make it handy and convenient. When you need it, you just pull out the tray and plug it in.

Can a generator be stored in a shed?

Many people recommend that you use a storage shed or small storage unit to store your generator safely. We advise not building a wooden shed or container as those tend to let in moisture and damage the unit.

Can a simple container be used to store a generator

Everything You Need To Know about Storing Generator ...
