Can't install solar panels

Overview

Most states allow homeowners to install solar panels themselves, provided they obtain proper permits, follow local building codes, and pass required inspections. Can I install my own solar panels?

Installing your own solar panels can be legal and cost-effective, but navigating the regulations requires careful planning. Most states allow homeowners to install solar panels themselves, provided they obtain proper permits, follow local building codes, and pass required inspections.

Do you need an electrician to install solar panels?

Most states allow homeowners to install solar panels themselves, provided they obtain proper permits, follow local building codes, and pass required inspections. However, any electrical connections to the power grid must typically be completed by a licensed electrician.

Should you install solar panels without a permit?

Don't skip this crucial step - installing solar panels without proper permits can result in fines, mandatory system removal, or complications when selling your home. Many localities also require certification of your installation by a licensed electrician, even if you do the main installation work yourself.

How do you install a solar panel?

Secure each panel in place with the provided retaining clips. One at a time, carefully lower each solar panel onto the stanchions in its intended spot. Snap the wiring plug from the micro-inverter into the underside of the panel. Then, screw the retaining clips that are attached to the edges of the panel to the aluminum rails.
