

Chad container solar panels power generation

Overview

Will a solar PV plant be a 'pioneering project' in Chad?

The European Investment Bank (EBI) described the solar PV plant as a "pioneering project" that "will help liberalise the energy sector, and mobile private investment in Chad." It is calculated that the cost of electricity will be less than half the current cost of power following the project.

How will the Djermaya power plant affect Chadians?

USAID'S Power Africa has guided tariff approaches, indicating that the Djermaya plant will produce electricity at a cost that is 40% less than existing sources. Overall, Chadians will have an increased access to cleaner, sustainable energy.

What is Djermaya solar project?

The Djermaya Solar Project will significantly improve Chad's socio-economic prosperity. Not only will the project provide lower cost energy, increasing accessibility across the country, but it will also create 250 jobs during construction, as well as 12 permanent positions during the operational phase.

Why do people in Chad use biomass?

People across Chad have to use conventional energy resources, such as biomass and charcoal in order to cook, light their house and other economic activities. In particular, it is women and children who spend a lot of time sourcing the biomass materials, which increases their risks of harmful respiratory diseases.
