

# Composition of Western European BMS battery management power system

## Overview

---

What is a battery management system (BMS)?

**Summary** A battery management system (BMS) is one of the core components in electric vehicles (EVs). It is used to monitor and manage a battery system (or pack) in EVs. This chapter focuses on the composition and typical hardware of BMSs and their representative commercial products.

What is a BMS structure?

The basic composition and working principles of the BMS structure are closely related, working together to ensure the efficiency, safety, and longevity of battery systems. With the development of battery technology, the BMS structure will continue to play a crucial role in the field of battery applications.

What is a battery monitoring unit (BMS)?

The BMS structure comprises multiple core components that work in synergy to ensure the efficiency, safety, and longevity of the battery system. **Battery Monitoring Unit (BMU):** Monitors parameters such as voltage, current, and temperature of the battery in real-time, ensuring each battery cell operates within a safe range.

What are the different types of BMS?

Depending on the number of cells in a battery system, BMSs can generally be divided into two categories: centralized and distributed. The chapter explains some of the commercial BMS products, such as E-Power, Klclear and Tesla, and some of the chips which can be used to design BMSs.
