Conical solar panels

Overview

Does a conical solar panel have a better thermal performance?

Three different values of heat flux and air injection rate were evaluated for each shape. The outcomes presented that the conical shaped solar panel exhibits better thermal performance than other geometries. Furthermore, conical form finds the least temperature that was about 10.5 °C less than that of the pyramid-shaped panel.

What is a conical shaped solar panel?

However, for the conical shaped solar panel, the temperature is distributed more evenly when compared to that in the other two shapes. In the conical shape, the maximum temperature occurs at two regions. The first region is near the bottom side and the second region is near the exit trapdoor of the solar panel.

What is the efficiency of a conical solar panel?

The maximum efficiency of the conical solar panel was observed at a mass flow rate of 24 kg/s and was approximately 0.0923. This was higher by 5.54% when compared to that of the pyramid shaped panel. For the , the behavior of the efficiency curves was similar to that of the two aforementioned cases. However.

Are conical shaped solar panels better than hexagonal solar panels?

Additionally, the heat transfer coefficient of the conical shaped solar panel is higher than that of the hexagonal shaped solar panel. The maximum improvement ratio of the heat transfer coefficient was between the conical shaped and pyramid shaped solar panels, and it was approximately 19%.

Conical solar panels

Conical-shaped solar panels cooled by forced airflow

A group of international scientists has compared the hypothetical performance of three novel shapes of solar modules - pyramidal, hexagonal and conical - and has found the ...
