

**EQACC SOLAR**

# **Container construction site power distribution cabinet**

## Overview

---

What is a distribution cabinet?

Distribution cabinets are connected behind connection, group or main distribution boards and are used for power distribution through CEE and earthing contact sockets with upstream protective devices. Connected loads from 22 to 277 kVA (32 A to 400 A main fuse). Please note the following special features:.

What is a power distribution container (PDC)?

Prefabricated, tested, and ready for delivery. Your e-house, or Power Distribution Container (PDC), is engineered in our facility with pre-installed components and wiring completed. Systems are fully parameterized, and system testing is performed before shipment to expedite installation and startup time.

What is a connection distribution cabinet?

Connection distribution cabinets are connected to the public supply network and serve both for measuring energy consumption and as energy distributors by means of built-in CEE and earthing contact sockets with upstream protective devices. The connected loads range from 55 to 436 kVA (80 A to 630 A main fuse).

What is a container distributor?

Container distributors are used to supply container systems with CEE and earthing contact sockets with upstream protective devices. These are connected behind connection, group or main distributors. The connected loads range from 55 to 246 kVA (80 A to 355 A main fuse). Please note the following special features:
