# **Container energy storage base station power generation plant**

## Overview

---

What is a containerized battery energy storage system?

Let's dive in! What are containerized BESS?

Containerized Battery Energy Storage Systems (BESS) are essentially large batteries housed within storage containers. These systems are designed to store energy from renewable sources or the grid and release it when required. This setup offers a modular and scalable solution to energy storage.

How many energy storage containers are there?

The installation comprises 48 energy storage containers, providing a total capacity of 250MWh and capable of delivering up to 50MW of power for five hours. Designed to provide critical grid stability, the BESS is a major step toward replacing fossil fueled generation with renewable energy.

How many kWh are in a battery storage container?

Each battery energy storage container unit is composed of 16 165.89 kWh battery cabinets, junction cabinets, power distribution cabinets, as well as battery management system (BMS), and the auxiliary systems of distribution, environmental control, fire protection, illumination, etc. inside the container; the battery container is 40 feet in size.

What is a container energy storage system?

Container energy storage systems are inherently modular, making them highly scalable and flexible. A single unit can store a small amount of energy, but these systems can be easily expanded by adding additional containers as energy demand grows.
