

**EQACC SOLAR**

# **Cost of replacing batteries at energy storage stations**

## Overview

---

How much does a battery storage system cost?

Replacing batteries can cost between \$5 million and \$15 million for a 50MW/50MWh system, depending on future battery prices. In summary, maintenance costs for utility-scale battery storage systems are significant and include both ongoing operational expenses and eventual replacement costs over the system's lifespan.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

Does battery storage cost reduce over time?

The projections are developed from an analysis of recent publications that include utility-scale storage costs. The suite of publications demonstrates wide variation in projected cost reductions for battery storage over time.

How much does a gas storage system cost?

Generally speaking, the cost of the gas storage tank is the most expensive part of the entire system. Operation and maintenance costs include energy consumption and equipment maintenance. The current cost of compressed air energy storage systems is between US\$500-1,000/kWh.
