# **Current price of monocrystalline silicon for solar modules**

## Overview

---

How much does a solar module cost?

With a specific silicon consumption of 14 grams per watt (g/W) and a spot price of \$28/kg, polysilicon made up costs of \$0.39/W or 12.6% of the average wholesale solar module price (\$3.10/W) in 2003. Due to the strong demand and the higher polysilicon costs, the average module price increased to \$3.35/W in 2004.

How are PV solar cell silicon wafer mono price developments calculated?

The price developments are expressed as a price index in US\$ prices converted at current FX rates, which are the FX rates applicable at the time the price was valid. PV Solar Cell Silicon Wafer Mono price index developments are calculated from multiple separate sources of data to ensure statistical accuracy.

How much does a solar module cost in 2025?

Specifically, in August 2025, the Price Index showed: about €0.055/Wp for low-cost photovoltaic modules, unchanged from July prices. “Manufacturers are moving quickly to end the devastating price war. The Chinese government is gradually phasing out tax incentives and subsidized solar module exports.

How much does a low-cost photovoltaic module cost?

Low-Cost Photovoltaic Modules: Average price of €0.060/Wp, a decrease of 7.7% compared to the previous month. These figures underscore the significant pressures in the photovoltaic market, as price reductions strain margins to unprecedented levels.

## Current price of monocrystalline silicon for solar modules

---

### Photovoltaic Module Prices 2025: Updated Data

Updated photovoltaic module prices 2025: in August, high-efficiency solar panels fell to an average of EUR0.12/Wp in Europe.
