

## EQACC SOLAR

# Do solar lights and LED lights have the same wattage

## Overview

---

What is the difference between solar cell and led?

The difference between Solar Cell and LED is that Solar Cells produce electricity directly from light whereas LEDs produce light directly from electricity. In other words, Solar Cells convert light into a form of electricity. On the other hand, LEDs convert the electricity into visible light and emit it.

What is the difference between solar lights and LED lights?

Solar lights harvest the energy of the sun (read: no batteries required) and are primarily used to provide outdoor lighting in the evenings. LED lights, meanwhile, emit light when currents run through them. While they do require a power source, they may last longer and produce a brighter light.

What is the difference between a grid-powered LED light and a solar-powered light?

Today, both solar and regular LED bulbs use the same type of LED chips. The difference is in their power source. A grid-powered LED fixture uses AC power, while a solar fixture uses a battery with DC power. Below is a table showing some differences between a typical grid-powered LED light and a solar-powered LED light 5:.

Are LED lights better than solar lights?

They fear they will pick the wrong solution. LED lights use electricity from the grid or another main power source. Solar lights rely on sunlight for energy, which cuts installation costs and wiring work. I have worked with both LED and solar lighting systems for many years.
