# **Do solar panels need batteries installed**

## Overview

---

Do solar panels need battery storage?

Absolutely! In fact, most home solar systems are currently operating without battery storage. If you're fine with drawing from the grid and not particularly worried about power outages, you might not need a battery. However, there are benefits to having battery storage for your solar panels — and they are becoming increasingly common.

Do you need a solar battery bank?

You essentially use the local utility grid as a battery to “store energy” without needing a solar battery bank in your home. If you have your own battery storage, you likely won’t transfer much energy to or from the grid. You store your own energy and pull from that, and the grid serves as a backup to the backup.

Can you use solar energy at night without a battery?

Without a battery, excess energy generated by your solar panels is sent back to the grid. To use solar energy at night, you would need to rely on net metering or a battery storage system.

What happens if a solar panel doesn't have a battery?

Without a battery, excess power is sent back to the grid, depending on your setup and location. Solar panels typically generate electricity during the day, but a solar battery can store energy for use at night or during cloudy days. A battery increases energy independence, provides backup power during outages, and can help reduce your energy bills.
