# Does solar power generation in Laos have to be equipped with energy storage

## Overview

---

How many solar power plants are there in Laos?

However, by the end of last year, only eight solar power projects and four biomass power plants were in operation, with an installed generation capacity of 116 MW, representing just 1% of the country's total electricity production. As of early 2023, Laos produced power from 76 hydropower dams, with another 43 still under construction.

How is electricity used in Laos?

Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as the sun, wind or moving water. of total generation.

Are renewables the cheapest form of power in Laos?

Notably, renewables are now the cheapest form of power, offering Laos a less carbon-intensive solution over new coal-fired power production. Amid climbing fossil fuel prices, global investments in renewables in 2021 saved USD 55 billion in global energy generation costs in 2022.

Should Laos manage its own power grid?

A better path forward would be for Laos to manage its own power grid to increase the efficacy of its growing electricity exports, along with much-needed revenue, and help develop its domestic grid for more solar power on its path to net zero in 2050. Tim has been working in energy markets in the Asia-Pacific region for more than ten years.
