# Double-glass components for rural light complementation

## Overview

---

What is the packaging film for double-glass module?

At present, the packaging film for double-glass module mainly includes EVA film and POE film. EVA adhesive film is an ethylene-vinyl acetate copolymer, which has the advantages of low melting point, good fluidity, high transparency, mature lamination process, and is the main packaging material for double-glass modules at present.

What is a double glass solar module?

In the ever-evolving world of photovoltaic technology, double glass solar modules are emerging as a game-changer. By encapsulating solar cells between two layers of glass, these modules offer unparalleled durability and efficiency. But what exactly sets them apart?

What are double glass solar modules?

.

Why should you choose a double glass module?

**Mechanical robustness:** The dual-glass structure offers exceptional resistance to mechanical loads, such as wind and snow, making them ideal for challenging environments. **Environmental shielding:** Double glass modules provide excellent defense against moisture, corrosion, and UV radiation, reducing the risk of potential-induced degradation (PID).

Can natural ventilated PV double glazing reduce indoor energy consumption?

Their findings demonstrated that the innovative naturally ventilated PV double glazing could notably decrease indoor energy consumption by 28 %. Lu and Law investigated the thermal, electrical, and indoor lighting performance of single-pane STPV windows installed in office buildings in Hong Kong.
