

**EQACC SOLAR**

# **Electric new solar container battery in Bergen Norway**

## Overview

---

Norwegian company Eitzen Avanti is set to build the world's largest battery-powered container ships after receiving funding from Enova, the Norwegian government's climate-focused innovation agency. Will Norway build a battery-electric container ship?

No payment required. Norway is backing the construction of two battery-electric container ships, set to carry 850 containers each and equipped with over 100 MWh battery capacity—making them the largest of their kind in the world.

Could Norway become the world's largest battery-powered container ship?

The ships, which will operate between Norway, Sweden and Germany, will have battery packs of more than 100 MWh. "They could thus become the world's largest battery-powered container ships," Enova added. The Port of Oslo is also receiving support for a charging facility for these ships at the container terminal on Sjursoya.

Could Enova become the world's largest battery-powered container ship?

The company will bank a grant of NOK 200m (\$20m) to develop two 850-teu feeder vessels in what Enova called a "ground-breaking project". The ships, which will operate between Norway, Sweden and Germany, will have battery packs of more than 100 MWh. "They could thus become the world's largest battery-powered container ships," Enova added.

How many containers can a Norwegian ship carry?

The project, supported by Norwegian state enterprise Enova, involves the construction of two vessels with battery packs exceeding 100 MWh. Each ship will have the capacity to carry up to 850 containers on routes between Norway, Sweden, and Germany.
