Emergency Energy Storage Power Supply in the Democratic Republic of the Congo

Overview

How much power does the DRC have?

The source, the ARE's annual report, the DRC's power output rose by 9.8% from 2020 to 2024. Despite this progress, the DRC's total electricity output remains remarkably low, reaching just 13.6 terawatt-hours (TWh) in 2024.

What is the future of energy in the DRC?

Solar energy, with its promising prospects, could reach up to 746 TWh per year if fully exploited. Biomass and natural gas also represent high-potential sectors, although their development is still limited. However, the DRC still faces significant challenges: reducing network losses, modernizing aging infrastructure, and attracting more investment.

What is the energy potential of DRC?

Solar energy is a standout area, with 67% of authorizations focused on photovoltaic projects, offering a projected capacity of 2,721 MW. The DRC also boasts immense hydroelectric potential, estimated at 100,000 MW, capable of producing between 438 and 525 TWh annually under optimal conditions.

How has the private sector impacted the supply chain in Congo?

To overcome this, the Congolese government allowed the private sector to step into the country's supply chain. Since 2020, 37 new projects led by private investors have been authorized, representing a potential installed capacity of 4,125.1 megawatts (MW).
