Is there a roadmap for energy storage in the Netherlands?

In the Netherlands, there has also historically not been a roadmap or detailed industrial strategy with supportive legislation, policy, taxation reliefs, or investment incentives for the energy storage market.

How much energy storage does the Netherlands need?

To achieve its renewable energy targets, reports in 2021 indicate that the Netherlands will need to install between 29 and 54 gigawatts (GW) of energy storage capacity by 2050. Storage with efficient management systems and digital controls is a crucial element of a reliable, flexible and affordable energy system.

Why are energy prices so volatile in the Netherlands?

The Netherlands is increasingly experiencing periods of extreme price volatility on the energy market. At times of abundant solar and wind energy, prices can even become negative, while in periods with little sustainable generation – the so-called dunkelflaute – prices rise sharply.

Does the Netherlands have a natural gas policy?

The Netherlands has also committed to eliminating natural gas from its energy mix entirely in favour of cleaner sources. The growth of renewable energy generation in the Netherlands and across Europe has played a vital role in decarbonising energy production.
