Energy storage cabinet design development prospects

Overview

Will the energy storage industry thrive in the next stage?

The energy storage industry is going through a critical period of transition from the early commercial stage to development on a large scale. Whether it can thrive in the next stage depends on its economics.

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

What are the economic impacts of energy storage technologies?

For instance, Johnson et al. evaluated the economic impacts of three energy storage technologies, namely Lithium-ion batteries, flywheels, and compressed air energy storage, using total cost of generation reductions to gauge the system value of each technology within a high-penetration renewable energy system.

When will energy storage become a large-scale development?

In March 2022, National Development and Reform Commission (NDRC) and National Energy Administration (NEA) released the 14th Five-Year Plan for the development of energy storage, which set the target for ES to enter the stage of large-scale development by 2025. The target calls for lower costs of ES.
