

## EQACC SOLAR

# Energy storage inverter working configuration

## Overview

---

What type of inverter/charger does the energy storage system use?

Inverter/charger • The Energy Storage System uses a MultiPlus or Quattro bidirectional inverter/charger as its main component. • Note that ESS can only be installed on VE.Bus model Multis and Quattros which feature the 2nd generation microprocessor (26 or 27). All new VE.Bus Inverter/Chargers currently shipping have 2nd generation chips.

How many inverters/chargers do I need in my ESS system?

There must be at least one inverter/charger (MultiPlus/Quattro) and one GX device such as the Cerbo GX or Ekrano GX in the system. Other components can be added when needed; see the ESS system design chapter.

What is energy storage system (ESS)?

33 1. ESS introduction & features What is ESS?

An Energy Storage System (ESS) is a specific type of power system that integrates a power grid connection with a Victron Inverter/Charger, GX device and battery system. It stores solar energy in your battery during the day for use later on when the sun stops shining.

Can an energy storage device be interconnected without an interconnection review?

The declaration allows interconnection of the energy storage device without an interconnection review if this mode is secure from change. In Energy Storage Guidelines document Section 3.2.1, Configuration 2A, the energy storage equipment is not capable of operating in parallel with the grid.
