# Energy storage power station cooperation mode

Application scenarios of energy storage battery products

## Overview

---

Will shared energy storage participate in the operation mode of multi-virtual power plant?

Considering the high investment cost of the energy storage system, it is proposed that the shared energy storage will participate in the operation mode of the multi-virtual power plant system as an independent subject, which will help to realize a win-win situation in cooperation between the VPP operator and the shared energy storage operator.

What is the operation model of pumped storage power stations?

In the operation strategy of pumped storage power stations, the operation model of pumped storage power stations in different countries is also different. The operation model of Japan's pumped storage power station mainly includes a leasing system and an internal accounting system.

Can shared energy storage power stations be profitable?

The construction condition of shared energy storage power stations on the power supply side is convenient, and the energy storage power station has excellent regulation performance. For now, China's policymakers are indicating that shared energy storage participates in the electricity market as much as possible for profit.

How does shared energy storage work?

For shared energy storage, the charging and discharging demands from multiple renewable energy stations will balance each other at some times. The balanced amount can be directly exchanged among renewable energy stations without operating losses, which is defined as virtual energy storage in this paper.
