**Energy storage projects have
been suspended**

Overview

Is the energy storage mandate a big change?

This is a big change towards rationalization of renewables but hidden within that is a removal of the energy storage mandate," George Hilton, research and analysis manager at S&P Global, tells ESS News. S&P Global estimates that the storage mandate has driven between 50 and 75% of domestic demand.

How will the energy storage mandate impact China?

S&P Global estimates that the storage mandate has driven between 50 and 75% of domestic demand. With China accounting for around 56% of the global energy storage demand in 2024, the impact of such a policy change will be massive.

How will China's energy storage policy affect global demand?

"China was on-track to install over 60% of all utility scale storage globally in 2025 and so in the absence of further policy changes, about 45% of global demand has just been wiped away," Hilton says. The ripple effect on the global demand-supply balance will involve further downward pressure on energy storage prices.

How many projects have E2 canceled?

E2, which has been tracking new investments in manufacturing and large-scale energy projects, is now expanding its regular reports to include project cancellations, shutdowns, and downsizings as well. From August 2022 to the end of 2024, 18 projects were canceled, closed, or downsized, according to E2's data.
