

**EQACC SOLAR**

# **Environmental Comparison of 350kW Folding Containers**

## Overview

---

Are eco-friendly cargo shipping containers a viable solution?

Traditional shipping containers, typically made from energy-intensive materials like steel and aluminum, not only leave a substantial carbon footprint but also pose challenges in terms of waste disposal and recyclability. As the industry evolves, a promising solution emerges in the form of eco-friendly cargo shipping containers.

What are eco-friendly containers?

Eco-friendly containers, made from sustainable materials and equipped with energy-efficient technologies, significantly reduce the carbon emissions associated with their production and operation. The use of recycled and renewable materials also cuts down on the need for new raw material extraction, further lowering the carbon footprint.

Are shipping containers harmful to the environment?

Traditional shipping containers are predominantly made from steel and aluminum, materials that require significant energy to produce, contributing to high carbon emissions. Each standard container can emit up to 5,000 kilograms of CO<sub>2</sub> during its production, adding to the industry's overall carbon footprint.

Are eco-friendly containers a good investment?

One of the primary barriers to the widespread adoption of eco-friendly containers is the high initial investment required. The costs associated with research, development, and production of sustainable materials and technologies can be significant, posing financial challenges, especially for smaller shipping companies.
