Financing for Nordic Solar Container Hybrid Project

Overview

Greenvolt Group, through its subsidiary Greenvolt Power, has signed a €35 million project finance agreement with Ringkjøbing Landbobank to fund the construction and operation of a large-scale hybrid renewable energy project in Høegholm, eastern Denmark. Is solar energy a viable option in Denmark?

The government supports solar PV installations through net metering schemes and tax exemptions, making solar energy a viable and attractive option. Denmark's commitment to integrated energy systems and smart grid technologies further enhances the potential of solar PV, integrating it seamlessly into the national energy mix.

Which Nordic countries are embracing solar PV technology?

During the recent surge in solar PV installations, the Nordic countries – Sweden, Norway, Finland, and Denmark – have increasingly embraced solar PV technology, defying their northern geographical challenges.

What is Greenvolt's 'hybrid project'?

The hybrid project is currently under construction and is scheduled to reach its Commercial Operations Date (COD) in the first quarter of 2026. “Hybrid projects like this one, which combine solar and battery storage, make renewable generation more efficient and strengthen our asset portfolio,” said João Manso Neto, CEO of Greenvolt Group.

Is solar PV a new power source in Norway?

However, in our Energy Transition Outlook we find that solar PV is probably the only new power source in Norway able to add capacity in the coming years. Wind, hydropower or nuclear require extensive legal and licensing frameworks and they have much longer build times compared to solar PV.
