Fire emergency communication command base station

Overview

What is a fire command center?

A fire command center is a room dedicated as the Fire Department response point, and serves as the center for their emergency operations. The FCC consolidates life safety system components and information to allow responders to efficiently evaluate and manage an emergency in the building.

What is an emergency communication system (ECS)?

The closest representation of an ECS was an emergency voice/ alarm communications system. During a fire emergency, its function was to provide a dedicated fire communication system for the partial or complete evacuation of occupants from large structures, such as high rise buildings, in a safe and orderly manner.

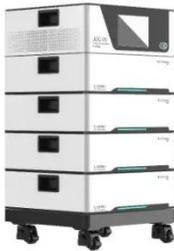

What is a fire department communications center?

The Communications Center • Communications center is the hub of the fire department response system. – Central processing point for emergency incident information – Connects and controls the department's communications systems The Communications Center • Size and complexity vary, depending on department needs.

What is an example of a fire emergency voice/alarm communication system?

An example of this is mass text messaging. An in-building fire emergency voice/alarm communications system consists of dedicated manual or automatic equipment for originating and distributing voice instructions to the occupants of a building, as well as alert and evacuation signals pertaining to a fire emergency.
