

EQACC SOLAR

Full set of solar system

Overview

How many bodies are in the Solar System?

The solar system is filled with a wide assortment of celestial bodies - the Sun itself, our eight planets, dwarf planets, moons, asteroids and comets. The Earth is the only body in the solar system known to have life.

What is included in our Solar System guide?

Our solar system guide covers everything from the eight planets and their moons to dwarf planets, asteroids, comets, and countless smaller objects, all held together by the Sun's immense gravitational pull.

How many planets are in our Solar System?

Our solar system includes eight planets. So far, Earth is the only place we've found life in our solar system. In addition to the planets, our solar system also includes the Sun, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets.

How many celestial bodies are in the Solar System?

Our solar system is filled with a wide assortment of celestial bodies - the Sun itself, our eight planets, dwarf planets, and asteroids - and on Earth, life itself! The inner solar system is occasionally visited by comets that loop in from the outer reaches of the solar system on highly elliptical orbits.
