# **Georgetown Power Station Energy Storage Policy**

## Overview

---

Will US storage capacity reach 450 GWh by 2030?

Current forecasts show that U.S. storage capacity is expected to reach 450 GWh by 2030, falling short of the capacity required to support our nation's energy needs. The whitepaper calls on states, regional transmission organizations, and the federal government to take action to accelerate storage deployment and manufacturing. These actions include:

What's new in energy storage policy?

The whitepaper outlines policy recommendations to open markets for storage development, build financial support, grow a domestic storage supply chain, and progress long-duration storage technology. In addition, SEIA is releasing a new 50-state guide to energy storage policies at the state level.

Does the energy storage strategic plan address new policy actions?

This SRM does not address new policy actions, nor does it specify budgets and resources for future activities. This Energy Storage SRM responds to the Energy Storage Strategic Plan periodic update requirement of the Better Energy Storage Technology (BEST) section of the Energy Policy Act of 2020 (42 U.S.C. § 17232 (b) (5)).

How much energy is stored on the grid?

28,000 MW of storage capacity—on a net summer capacity basis—installed on the U.S. electricity grid.<sup>34</sup> Pumped hydroelectric storage accounted for over 80 percent of this capacity, and lithium-ion batteries accounted for nearly 17 percent. Other technologies represent approximately 1 percent of total grid energy storage capacity.
