

**EQACC SOLAR**

# **Gigawatt Solar Modules**

## Overview

---

How many watts can a 10 GW solar module produce?

Reliance Industries Ltd has started production from the first phase of the planned 10 GW solar module facility. The fully automated line produces HJT panels with up to 720 Wp output. Reliance Industries Ltd has started production from its first gigawatt-scale solar module line. The fully automated line produces HJT panels with up to 720 Wp output.

What is the world's first gigawatt-scale manufacturing facility for perovskite solar modules?

It is the world's first gigawatt-scale manufacturing facility for perovskite solar modules. The first phase of the plant, with a nameplate capacity of 1 GW, broke ground in May 2024 and was completed in just over a year. The second phase will expand capacity to 2 GW, depending on market demand.

Where is Reliance Industries launching a gigawatt-scale solar module manufacturing facility?

Reliance Industries has commissioned the first production line in its gigawatt-scale solar module manufacturing facility in Gujarat. The facility has an initial production capacity of 10 GW per year and is being rolled out in phases. The facility will produce 720 Wp heterojunction technology (HJT) modules.

How many PV modules will utmolight produce a year?

Once the project reaches full capacity, it is expected to produce approximately 1.8 million perovskite PV modules annually. Image: UtmoLight.
