# **Gigawatt Solar in Australia**

## Overview

---

Will Australia build a solar farm in Singapore?

The Australian government approved on Wednesday an ambitious plan for a massive solar farm intended to power millions of homes domestically and supply electricity to Singapore. The project now depends on sign-offs from Singapore's energy market authority, Indonesia's government and Australian Indigenous communities.

How much solar power does Australia have in 2023?

As of December 2023, Australia boasts an impressive 12.5 gigawatts (GW) of utility-scale solar capacity, contributing significantly to the national grid (Australian Energy Market Operator, 2023). This figure represents a 2.5 GW increase in the past year, showcasing the growing momentum behind large-scale solar projects. 3.

Which big solar companies already have gigawatt-scale plans?

Some big solar players already have gigawatt-scale plans. Lightsource bp, the renewables developer 50% owned by BP wants 25 GW of solar by 2025 and says it has a 55 GW early-stage project pipeline across 19 countries.

Are large-scale solar farms making a difference in Australia?

While rooftop solar reigns supreme, large-scale solar farms are making their mark. As of December 2023, Australia boasts an impressive 12.5 gigawatts (GW) of utility-scale solar capacity, contributing significantly to the national grid (Australian Energy Market Operator, 2023).

## Gigawatt Solar in Australia

---

### Australian electricity generation renewable sources

The figure shows Australian electricity generation from renewable sources in gigawatt hours from 1999-00 to 2023-24. Generation from renewables has increased ...
